

# Saving Money with NetCore On Demand

A Guide to Increasing Network Performance and Decreasing IT Costs

## When Network Problems Occur

Identify the problem and resolve it

It's not a matter of if you'll have network and application performance issues, it's a matter of when and how much they'll impact the bottom line of your business. Since you can prevent all network issues it becomes critical how you troubleshoot and resolve them. NetCore On Demand puts the details of network and application performance at your fingertips and provides the fastest time-to-repair solution on the market for resolving network problems. Faster resolution and higher network and application productivity means a better bottom line.

## More bandwidth is not the answer

How much bandwidth is too much?

The traditional method of resolving network issues is by simply throwing more bandwidth at the problem. This can temporarily alleviate network congestion but more often simply encourages more of the same problems. It's just a matter of time until you're faced with yet another bandwidth upgrade, and the capital and reoccurring costs that come with it. NetCore On Demand lets you ensure your network usage is aligned with business priorities. If network links are starting to fill, you identify and throttle back recreational and non-business apps to free up more capacity for business critical applications and processes. This saves money and encourages the right behaviour when it comes to network utilization.

*"We were just about to upgrade the links at four of our locations. NetCore On Demand quickly identified that over 40% of our peak traffic was streaming media at these locations."*

## Trending and capacity planning

Scaling for new growth and technologies

Looking at migrating to MPLS or rolling out VoIP? What about a new Web Services solution or global collaboration software? NetCore On Demand lets you project network capacity requirements based on historical information, company growth metrics and new application roll outs. You'll dramatically increase the success rate of new technologies and solutions in your organization. This increases operational efficiency, decreases the duration of roll-outs and reduces the need for costly consultants and unnecessary network assessments.

## On-Demand Service

The NetCore On Demand service requires no hardware or software on site. Simply create a **free 15 day evaluation** account and configure your network devices to send information to your server. In less than 15 minutes you'll be generating network and application performance reports. Don't be a victim of poor network and application performance any longer. **Find out what's on your network and take control with Vineyard Networks NetCore On Demand.**
